

B2
cont a second rim element having a uniform thickness substantially equal to a diameter of said core and being fitted into said notch of said first rim element after said core.

Kindly add the following new claim 29.

B3 29. The steering wheel of claim 26, wherein said transfer print includes a transfer ink layer having a thickness gradually reduced toward a rear-side of said annular rim section so that a ground pattern formed by said transfer ink layer gradually appears on said annular rim section when viewed from said rear-side toward said front-side.
